

skm.skm_1.Heavy

The figure is a scatter plot on a white background with a black border. It contains two sets of data points: blue dots and red dots. The blue dots are scattered across the plot area, with a higher density in the lower half. The red dots form a continuous, connected path that starts in the lower-middle section, rises to a peak in the upper-right quadrant, and then descends with some fluctuations towards the right edge. The path of red dots is more complex and dense than the scattered blue dots.
